## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 9/25/03 have been fully considered but they are not persuasive.
2. Regarding claims 13-15, Applicant admits that equation 1 of the reference to Furuskär et al. represents a performance measuring function that uses at least one parameter, but contends that there is no teaching of calculating a threshold value including the step of determining a range of signal quality values for which the performance criteria function is maximized for each of the link adaptation modes. The Examiner respectfully disagrees.
3. In page 1285, the final paragraph starting on the left hand column of the reference to Furuskär et al., it is stated that the task of the link adaptation algorithm is to always select the scheme  $n$  maximizing throughput  $S_n$ , and that each link adaptation scheme achieves the highest throughput among the different schemes for a certain link quality. Reference is made to Figure 1, which clearly shows that there is a range of link quality values for which each scheme maximizes the throughput. Thus, a range bounded by threshold values for each link adaptation mode is explicitly shown in Fig. 1, where the thresholds correspond to the link quality values for which each link adaptation scheme begins and finishes realizing the highest throughput with respect to the other link adaptation schemes.
4. The rejection of claims 13-15 is maintained, and is restated below.

### ***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2634

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

6. Claims 13-15 are rejected under 35 U.S.C. 102(a) as being anticipated by Furuskär et al.

7. Regarding claim 13, Furuskär et al. teach the calculation of threshold values for each of at least one link adaptation modes where a performance criteria function is calculated using at least one parameter (p. 1285, equation 1), and for each link adaptation mode in Table 1, a range of signal quality values for which the performance criteria function is maximized is determined (see p. 1285, left hand column, final paragraph, Fig. 1), where the environment is considered a retransmission environment as retransmissions are performed as necessary (see p. 1285, left hand column, section B).

8. Regarding claim 14, the performance criteria function is a throughput function,  $S_n$ , dependent upon a radio interference rate,  $R$ , and a block error rate value,  $BLER_n$ .

9. Regarding claim 15, the signal quality value is a function of a signal to interference ratio (C/I).

***Allowable Subject Matter***

10. Claims 1-12 and 16-19 are allowed.

***Conclusion***

11. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 2634

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
